Abstract . . . . .	i
Significance for defence and security . . . . .	i
Résumé . . . . .	ii
Importance pour la défense et la sécurité . . . . .	ii
Table of contents . . . . .	iii
List of figures . . . . .	v
List of tables . . . . .	v
1 Introduction . . . . .	1
2 Definitions . . . . .	1
3 Towards the proposed interrupted branching model . . . . .	3
3.1 General branching model . . . . .	3
3.2 Modified branching model . . . . .	3
3.3 Interrupted branching model . . . . .	4
3.4 Summary of the interrupted branching model and its parameters . . . . .	6
4 Assumptions and parameters about the infectious disease . . . . .	6
5 Simulations I - Modified branching model: General evaluation of the impact of self-isolating, of group size, of frequency of event, and of probability of infection on the spread of the virus . . . . .	8
5.1 Methodology, assumptions, and parameters . . . . .	9
5.2 Results . . . . .	9
5.3 Discussion of results . . . . .	12
5.4 Conclusions . . . . .	13

6	Simulations II - Interrupted branching model: Scenario specific evaluation of the impact of different mitigation strategies . . . . .	17
6.1	The Diamond Princess outbreak . . . . .	17
6.1.1	Methodology, assumptions, and parameters . . . . .	18
6.1.2	Methodology . . . . .	19
6.1.3	Results . . . . .	19
6.1.4	Discussion of results . . . . .	19
6.2	Tent scenario . . . . .	19
6.2.1	Assumptions and parameters . . . . .	20
6.2.2	Methodology . . . . .	20
6.2.3	Results . . . . .	20
6.2.4	Discussion of results . . . . .	20
6.3	Conclusions and discussion . . . . .	20
7	Simulations III - Comparison to other models: CAF Ship Scenario . . . . .	20
7.0.1	Assumptions and parameters . . . . .	20
7.0.2	Methodology . . . . .	20
7.0.3	Results . . . . .	20
7.0.4	Discussion of results . . . . .	20
8	Limitations of the interrupted branching model . . . . .	20
9	This model's application to the CAF . . . . .	20
10	Conclusions . . . . .	22
	References . . . . .	23
